

# HANDY TIPS TO AVOID FROZEN PIPES THIS WINTER

Frozen pipes can leave you without water, and if they break, are expensive to repair. Prevent frozen pipes by taking steps now!

## BEFORE COLD WEATHER

Drain and turn off all outdoor water lines.

Fix drafty windows and doors.

Seal at pipe openings to stop cold air.

Know how to shut off your water.

Wrap your pipes in insulation, especially in cold, drafty places.

Install heat tape, or check existing to make sure it is functional and in good shape.

## DURING SEVERE COLD

Keep the thermostat above 55 degrees F.

Allow inside faucets to trickle. This makes it more difficult for water to freeze.

Open kitchen and bathroom cabinet doors to give plumbing access to warm air.

Check your heat tape.

## IF YOUR PIPES DO FREEZE

Shut off water into the home immediately.

Keep the faucet open.

Apply heat with hair dryer, electric heating pad, or portable space heater.

Do not leave space heaters unattended or use open flames.

Need help? Call a licensed plumber.

Once pipes are thawed, slowly turn water back on and check for cracks or leaks.
